PROJECTS

CD Pipeline using AWS Github

I learned how to set up a continuous delivery pipeline that will deploy any web application automatically anytime if source code is updated. This project uses GitHub, AWS Elastic Beanstalk, AWS CodeBuild, and AWS CodePipeline.

Create a Simple Website Server

It enhanced basics of automation and scripting tools. You will equip a web server with automation and publish a website onto it. This website can be a blog or a digital portfolio. I gained knowledge of web development, server deployment, and networking.

Build Java Applications with Gradle Devops

Gradle is a popular build automation tool that can be used in several platforms and languages. This project consists of building a Java application and organizing it into several subprojects to modularize it.

EDUCATION

Computer Science St.Jhons College Of Engineering

05/2019 - 06/2024

MPC(DIPLOMA) Akshara Sree College

05/2018 - 05/2019

ACHIEVEMENTS

Team Head at DEFCON Summit

I was the team leader and contributed my cybersecurity expertise to help our team place in the top 15 out of 100.

Devops Bootcamp by Techworld With Nana

I enrolled in this bootcamp to advance my knowledge of Devops Tools and Practices in the software industry. I left this bootcamp feeling very optimistic about the world of devops.

BugBounty

I was able to find bugs in many organisations which are owasp top 10 with the help of Hackerone
